Social Media:

## SKILLS

**Frontend:** Html, CSS3, SASS, Js(React), & Redux

**Graphics:** Adobe Illustrator and Photoshop

**Version Control:** Git, Github, Bitbucket

**Languages:** Yoruba and English

## EXPERIENCE

**DevCareer** - Frontend Engineer [[devcareer.io](https://devcareer.io)]

AUGUST - NOVEMBER

- I work with a team of 8 developers to build web applications using Trello and Pivotal tracker for project management.
- Led the team of 4 developers to build a static [Lopper](#) website using Git and Github for version control, HTML5, CSS3, SASS and Node.js. My role was to lead the team, create reusable components, review, test and merge good PRs.
- Currently collaborating with the entire team to build [Dae-alright](#) web application using React & Redux, Git/Github, Node and Pivotal tracker. My role is to build User interfaces, consume APIs and add security to applications. I create component templates in such a way that other team members can make use of the code to create other components.

**Andela Learning Community 4.0** - Mobile web Specialist

MAY 2019 - JAN. 2020

- Joined Andela Learning Community Mobile web track and I learn mobile web development with Angular.js. I was provided the resources and tutorials to learn and take skill assessments in order to move to the next phase.
- Built [Album store project page](#) as final project with Angular.js, Typescript, Git and Github

**Rasmed Publications** - Web developer

JAN. 2019 - AUG. 2019

- Worked with the Digital team to design fliers and book covers using Adobe Photoshop and Illustrator. My role was to resize the images and upload them to the website.
- Learned Wordpress and managed the company's official website, fix the bugs and update it on a daily basis.

**HNG 5.0 Internship** - Software Engineer Intern

APR. 2019 - JUN. 2019

- Worked with a team of Backend developers using trello for project management and Git/Github for collaboration. My role was to write code to protect the App.

- Built server side of [devalert](#) web application with the backend team using Node.js, Express.js and handlebar template engine.
